Identifying and reframing gendered bias in BaZi & astrological narratives · Cluster B · Generation AI 2026

Xintian Zhang Lead teacher: Lawted Wu Social Science / Digital Humanities

INTRODUCTION

Young people absorb gender roles from fate-talk: the same chart praises men as “ambitious” and women as “ke-fu” or “too strong.” We need **reframing**, not only prediction.

RQ: How does an AI-assisted site affect ability to identify and reframe gendered divination bias?

LITERATURE

- Gender as performative script (Butler, 1990)
- Discourse & power (Foucault, 1972)
- AI oracles as authority (Bender et al., 2021; Cotter, 2022)

METHOD

Within-subjects pre/post · **N = 19 paired** (34 sessions, 23 journeys) · 5 interviews

Sites: **pages.dev/game** + **vercel.app/game**

6 steps: choose chart → birth data (local) → traditional read → bias scanner → Court of Destiny → 3-column compare

RESULTS

+0.31 BIAS AWARENESS ΔM	+0.47 REFRAME CONFIDENCE	+0.31 GENDER LENS
---	--	---

Agency ΔM −0.11 · Stereotypes 0.00 · Astrology 13 / BaZi 10 · Interviews: 3-column compare most cited; onboarding requested

LIMITATIONS

- Convenience sample; 4 journey completers without post-survey
- Self-report; single ~15 min session
- Descriptive statistics only

IMPLICATIONS

Embed critical literacy inside divination media. Require user reframing before AI text. Add step tutorial.
